

# Project Design Phase-I

## Solution Architecture

Date	22 October 2022
Team ID	PNT2022TMID42867
Project Name	Project - <u><i>Smart Waste Management System For Metropolitan Cities</i></u>

### Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

### Example - Solution Architecture Diagram:
